

# Expect More From Your PACE Pharmacy

CareKinesis delivers the valuable PACE pharmacy services you need — **plus** innovative methods for preventing adverse drug events and achieving better outcomes

Brochure | 2021

## Expect More From Your PACE Pharmacy

CareKinesis is a pharmacy dedicated to serving only Programs of All-Inclusive Care for the Elderly (PACE) and their participants. We optimize participant outcomes, streamline workflow, and reduce total cost for our PACE clients.

CareKinesis partners with PACE providers to develop personalized treatment regimens for every participant. We leverage innovative technology to reduce adverse drug events (ADEs), falls, and hospitalizations. This results in better clinical outcomes for participants and better financial outcomes for our PACE clients.

CareKinesis also delivers the services you expect from a PACE pharmacy—secure delivery to PACE centers or participant homes, on-site dispensing options, adherence packaging, and more—with the highest level of accuracy and care.

## CareKinesis is a Service of CareVention HealthCare

CareVention HealthCare offers the industry's most comprehensive integrated portfolio of services for PACE programs, including PACE-specific EHRs, third-party administration, risk adjustment services, and consulting services. CareVention HealthCare provides the support a PACE team needs to operate their program efficiently, compassionately, and successfully. CareKinesis integrates with these other PACE services to deliver the best possible experience for PACE administrators and participants.

# Expect the Best From Us

At CareKinesis, one of our key goals is to raise expectations about what a PACE pharmacy service can—and should—do. We pride ourselves on delivering the best possible PACE pharmacy services and also offer a suite of data-driven, clinically validated medication safety services that no other pharmacy can match. You want the best for your participants, so expect the best from us.

## Custom medication packaging

Every PACE participant is unique, and medication packaging should be tailored to meet each individual's needs. Medication Adherence Cards (MACs) that offer specific, easy-to-follow medication instructions informed by MedWise® Science are our most popular packaging option. We also offer easy-to-open pouches and traditional vials.

## Pharmacogenomic testing

Genetics can predict medication outcomes, both positive and negative. Optional pharmacogenomic (PGx) testing provides insight into how participants metabolize medications. CareKinesis pharmacists use PGx test results in collaboration with prescribers to develop a treatment regimen appropriate for the participant's therapeutic goals and genetic makeup.

## Cloud-based pharmacy solution

EireneRx® is a HiTrust CSF-certified cloud-based e-prescribing pharmacy solution that integrates with your electronic health records to ensure accurate, reconciled medication profiles. EireneRx supports easy access to cycle/last fill and allergy tracking information, and auto-cycle and electronic renewals/reconciliations capabilities, all at the point of prescribing. EireneRx integrates a physician/nurse to pharmacist/pharmacy technician communication platform, and demographic and dispensed data. EireneRx is also available as a standalone product.

## MedWise risk mitigation technology

Innovative MedWise risk mitigation technology helps identify potential ADEs before they occur. Our proprietary clinical decision support tools, including the MedWise Risk Score™, are incorporated in the EireneRx platform.

## 24/7 clinical consultation

CareKinesis pharmacists are board certified in geriatric pharmacy and are ready to take your call and provide clinical consultations any time, day or night. Our pharmacists can also coordinate community pharmacy network requests.

Pharmacy services you expect,

# Performance That Goes Beyond

CareKinesis offers unique services to help prevent ADEs and increase medication safety. We also deliver all the PACE pharmacy services you expect, with a level of accuracy, attention to detail, personalization, and superior support that exceeds your expectations. CareKinesis is your partner in achieving better clinical and financial outcomes.

## Customized transitioning services

We know changing your pharmacy partner is a challenge, but CareKinesis provides the highest level of support to make it easy. We offer on-site orientation and transition services, including customized implementation and training programs to ensure a smooth start.

## Medication management, access, and adherence

Custom packaging and regimens informed by the MedWise Risk Score are only part of the story. We also offer medication adherence training for participants. On-site medication cabinets and emergency medications are also available, so your clinical team has immediate access to urgent medications.

## Door2Door secure delivery

We offer both PACE center and participant home delivery services, with same day and next day medication delivery options available. Door2Door participant communications provide text and/or voice delivery notifications to inform participants or their caregivers when their medication has arrived. Our Door2Door chain-of-custody app allows PACE programs to track, document, and audit the status of prescription medications to the point of delivery with any connected device. This eliminates the hassle of paper-based tracking and streamlines workflows for your program.

## Quality assurance, compliance, and clinical initiatives

CareKinesis offers PACE-specific quality improvement programs that meet Medicare Part D requirements, as well as Part D and prescription drug event (PDE) submission services to reduce administrative costs while assuring regulatory compliance. We can customize clinical initiatives to meet your program's specific needs with regard to opioid management, fall prevention, polypharmacy, and more.

## Reporting

Customizable dashboards within our report portal help you manage controlled substances, acetaminophen dosage, and other important medication risk management topics. The medical director dashboard provides hospitalization/ER visit utilization and financial reports, helps with analysis and benchmarking, and supports improved outcomes.

## Education

CareKinesis sponsors accredited CME, CNE, and ACPE clinical education. We also offer non-CE educational webinars on other PACE topics throughout the year and monthly training sessions on our EireneRx platform.

## Expect more from your PACE pharmacy

Serving PACE programs and their participants is our top priority at CareKinesis. In fact, it is our only priority. Leverage our dedication, innovation, experience, and knowledge in PACE to provide your participants with the benefits of our unique service offerings.

Expect more from the

# MedWise Risk Score

**The only tool proven to reduce ED visits, hospitalizations, falls, and premature death**

The MedWise Risk Score presents an unprecedented view of a participant's total medication-related risk based on the complex interactions of multiple agents. Assessing ADE risk on a drug-by-drug basis is not enough to evaluate complex medication regimens and can lead to participants experiencing ADEs despite adhering to their treatment plans and taking medications as prescribed.

With its holistic approach, the MedWise Risk Score accounts for multiple simultaneous interactions as well as cumulative effects. This allows CareKinesis pharmacists to develop lower-risk regimens that still meet therapeutic goals for chronic and acute conditions.

**VS.**

## Traditional one-to-one drug analysis

The one-to-one drug interaction software embedded in EHRs and used by pharmacies, pharmacy benefit managers (PBMs), and others, is four decades old.

## MedWise multi-drug analysis

Our novel software weighs multiple drug interactions and offers medication decision support.

# Clinically Validated Risk Quantification

## The MedWise Risk Score correlates with increased medical costs, ADEs, and mortality

A retrospective review of the data of more than 400,000 EHRs demonstrated a positive correlation between the MedWise Risk Score and the ability to predict mortality risk after controlling for common comorbidities and other conditions that increase the risk of death.

2.58  
(2.06-3.25)

This study is an important addition to the growing body of knowledge around the clinical and financial relevance of the MedWise Risk Score. Previous publications showed correlations between the risk score and increased medical spending, ADEs, emergency department visits, and hospitalizations.

Only CareKinesis offers this powerful risk assessment tool, which CareKinesis pharmacists can use in conjunction with prescribers to develop personalized treatment regimens that reduce the risk of ADEs for PACE participants. Fewer ADEs mean better clinical outcomes for your participants and lower healthcare expenditures for your program. That's what you can expect when you partner with CareKinesis.

We're so confident in our ability to reduce clients' costs, we offer value-based contracting.

CareKinesis clients have documented cost savings with a 13:1 ROI in PACE (return on administrative fee).
