

*Proven, Scalable Architecture Designed for PACE and Beyond*

CareVention HealthCare offers an array of industry-leading tier-one solutions that have supported thousands of PACE participants and users. PACElogic is the top-rated EHR\* in PACE and the most popular choice for new programs looking to minimize capital spending while meeting information management requirements.

PACElogic, used by more than 40 PACE organizations, delivers opportunities for top- and bottom-line insight, innovation and improvement.

- ◆ Integration with standard EHRs from major companies; also delivers as a robust, standalone solution without EHR
- ◆ Claims adjudication system used by dozens of PACE organizations plus conventional Medicare, Medicaid, and commercial health plans to adjudicate claims for more than 30 million lives
- ◆ Turnkey solutions enable PACE organizations to respond quickly and effectively to initiatives

*Top-rated EHR in PACE\* garnering 100% satisfaction ratings across multiple categories, including:*

- Overall product performance
- Customer service
- Price of product
- Day-to-Day Operations
- Care Plan module
- User Interface
- Mobile applications

*Quality Management & Encounter Data*

CareVention HealthCare's EHR/Integrated Technology Solutions service line's mastery of quality and encounter data has produced certified solutions that greatly reduce the expense and time associated with executing these critical business activities. Our team works closely with and is committed to the National PACE Association's Data PACE strategic initiative. We guarantee your organization's ability to participate in all current and future Common Data Sets. Partnering with CareVention HealthCare and PACElogic as your certified encounter data submitter means you can have peace of mind.

## Key Features

### Care Planning

Designed for PACE pursuant to CMS specifications, PACElogic makes participant-centered care planning simple, fast, and collaborative for all IDT members in real time. Link clinical notes directly to Care Plan interventions. Automatically track when care plans and associated assessments are due.

### CMS Audit Universes

Through the use of PACElogic systems and daily workflows, our solution tracks and logs all the required data to generate the primary CMS Audit Universe files.

### Intake and Referral Management

PACElogic reports and tracks potential participants from initial phone call through enrollment. Report on conversion rates, referrals by source, and other metrics through PACElogic's robust CRM and reporting features.

### Assessments

Electronic forms for pre-enrollment and functional assessments are recorded and stored for review and analysis and are accessible using mobile and other remote devices.

### Incident Reporting

Falls and medication errors are tracked and integrated with team notifications for subsequent follow-up and documentation. Quality and compliance reporting are made simple and the related HPMS submission data can be exported.

### Grievances

Management can record and track progress of reported grievances and the associated follow up by the IDT. The grievance module is designed for native reporting in the HPMS and CMS Audit Universe format.

### Service Request and Appeals

Sites can document the genesis of and responses to all service requests through the process of request, approval, denial, and appeal. Customizable to reflect the internal policies of your PACE organization.

### RAPS

Correctly extracts data from EMR and claims software where it is combined and the information is further screened for errors. PACElogic then generates the RAPS submission file. Return files are processed and submission status for encounters are updated. Issues or errors are detected and highlighted for immediate resolution.

### Data Exports

Including CMS enrollments and disenrollments, DataPACE2, HOS-M, HPMS (Appeals, ER Visits, Grievances, Falls, Medication Errors and Burns) and other reporting requirements).

- Initiate** — Assessments performed and documented. Problems identified for care planning.
- Create** — Review documentation with IDT. Identify goals, measurable outcomes, and interventions.
- Communicate** — Review with participant/caregiver. Sign and share active care plan with IDT.
- Execute** — Interventions implemented. Progress monitored and documented.
- Close & Archive** — Interval assessments performed. Status of measurable outcomes noted. Care plan cycle begins anew.
