This session will provide a basic review of TruChart LIFEplan functionality and take you beyond the basics

By the end of this session attendees will be able to:

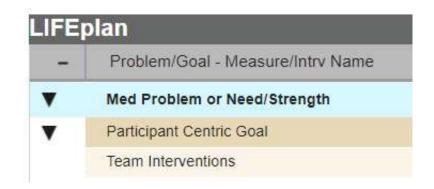

- Use the LIFEplan to capture information for the CMS LOPMR Report
- Understand workflows for updating LIFEplans to match encounter documentation
- Use smart tables to pull reports of LIFEplan information

Before We Begin: some LIFEplan basics

Standard LIFEplan features include:

- Displays on the Snap and LIFEplan (CarePlan) quickviews
- Editable versions on most forms for real-time updates
- Logic to support the care plan process
- ICD10 coding on Medical Problems
 - · HCC's display if enabled
- LIFEplan Template library to standardize entries
- Scheduled Activities
- Quick Notes lists edited by site

TruChart LIFEplan

List of Participant Medical Records

CMS Universes LOPMR Report

LOPMR: data capture

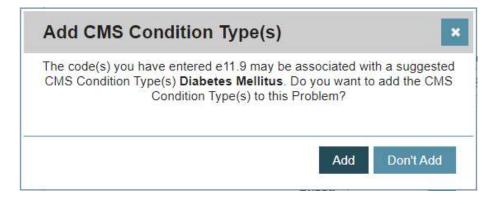

The LOPMR report tracks CMS Condition Types. These are pulled from unresolved problems on the participant's LIFEplan using the following logic:

- The start date is less than or equal to the audit period end date AND.
- The resolve date is greater than or equal to the audit period start date, OR
- The resolve date is null (the problem has not been marked as resolved)

When adding ICD-10 codes to medical problems TruChart may alert you with a suggested CMS Condition Type.

Condition types can be setup in the LIFEplan Template Library.

Suggested CMS Condition Type Helper Code

Charge Tickets and LIFEplan Coding

ICD-10 Coding

Charge Tickets

Primary Diagnosis

1 1 150.32 Chronic diastolic (congestive) heart failure
2 E11.9 Type 2 diabetes mellitus without complications
3 E03.9 Hypothyroidism, unspecified
4 H40.9 Unspecified glaucoma

Charge Ticket forms capture internal encounter data including

- Date of service (DOS)
- Place of service (POS) with CMS codes
- Primary diagnosis codes
- Current Procedural Terminology (CPT)
- Units and Unit Charges

Charge Ticket forms may be automatically generated based on your system setups.

Charge Tickets may be coded by the provider or a professional medical coder.

Something to consider

What if the medical coder identifies additional or different ICD-10 codes?

A Charge Ticket will auto-generate and reflect the ICD-10 codes from LIFEplan updates on the encounter form. What happens next if the medical coder identifies new codes or code changes?

Do you have a plan for this scenario?

How do new ICD-10 codes get added to the LIFEplan?

Option: The medical coder opens a LIFEplan management form, makes the suggested update and routes the unsigned form to the provider for review and signing.

Option: The medical coder contacts the provider outside of TruChart with the suggested update and the provider opens a LIFEplan Management form on the encounter to enter the change.

Option: The medical coder signs the Charge Ticket and requests a review/co-sign with a note to the provider with suggested updates.

Monitoring Progress

Reporting

Reporting: global views and smart tables

In addition to LOPMR reporting the following reports provide visibility to the care planning workflow and data capture

Care Management module

- Patient tool
 - Diagnosis
 - LIFEplan Problems
 - Interventions Overdue
 - Assessment Due
- Assessment tool (MLTC only)
- Form Reports tool
 - Forms tab Care Plan Review
- Charge Ticket Reports tool

TruChart Help
